

Nested RT-PCR Kit for Diagnosis of Kyasanur forest disease

Salient Features of the Technology:-

- The technology is the first nested RT PCR kit for KFDV detection.
- The kit is developed indigenously for diagnosis in human, monkey and tick samples.
- Test developed is specific, sensitive and cost effective as well.
- Test is user friendly and protocol easy to understand. Basic Real time PCR trained users will be able to perform the test easily.
- It has been developed by National Institute of Virology, Pune (an ICMR institute).
